## 🏆 INNOVATIONS

- **Mechanistic Score for COVID-19 lethality (MSL-COVID-19)**  
Clinical Estimator
  - We developed a mechanistic score to evaluate the risk for complications and lethality attributable to SARS-CoV2, considering the effect of obesity and diabetes in Mexico. Our score offers a clinical tool for quick determination of high-risk susceptibility patients in a first-contact scenario.
  - [doi:10.1371/journal.pone.0244051](https://doi.org/10.1371/journal.pone.0244051)

Areas of Expertise: Datasets management, Statistics of central tendency and variability, Probability distributions, Simple linear regression, Multiple linear regression, Experimental design, Fixed and random effects models, Analysis of experiments, Analysis of cross-sectional studies and Cases and Controls, Mediation analysis, Unsupervised modeling with regression methods, Survival analysis and Cox regression, Competitive risk models, Calibration of predictive models

2019

● **Metabolic Score for Visceral Fat (METS-VF)**

Clinical Estimator

- Using as starting point the availability of body composition evaluations with intra-abdominal fat estimation by dual X-ray absorptiometry (DXA) obtained in the Metabolic Disease Research Unit at the INCMNSZ, I developed an equation that combines METS-IR with age, sex and waist-to-height ratio to estimate visceral adiposity, as well as metabolic risk for type 2 diabetes mellitus and incident systemic arterial hypertension. It is specific for Mexican and Latin American population.
